Characteristics of Social Security Disability Insurance Beneficiaries

U.S. Department of Health and Human Services
Social Security Administration
Office of Disability
Division of Disability Studies

SSA Pub. No. 13-11947

May 1987

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402

Foreword

This report presents data that identify and highlight basic characteristics of those disabled workers whose claims for benefits were allowed during calendar years 1980-84, inclusive. The data presented include the age, sex, occupation, diagnosis, mobility, and State residence of workers allowed benefits during the period. Two tables of predisability occupations are also included. The data base was a sample of disability decisions made during 1980-84. These data are a valuable resource for persons involved in public information activities as well as those responsible for the future direction of the social security program.

This report was compiled by Audrey Coe, under the direction of Aaron Krute (retired Director) and Malcolm H. Morrison, Acting Director, Division of Disability Studies, Office of Disability. Dan Schatz and Evalyn Garvin were responsible for the data processing, and Delores Russell reviewed the tables. Additional information may be obtained from Audrey Coe: 301-594-0721 (FTS: 934-0721).

Introduction

This compilation presents statistical information on the kinds of people who receive social security disability insurance benefits. Statistics are presented on selected demographic, socioeconomic, and medical characteristics of persons who were allowed benefits as disabled workers during the period 1980–84, inclusive.

Data were obtained from the disability determination records of the Social Security Administration. These records are prepared for each claim for disability insurance benefits that is processed, and include data on education, usual occupation, industry, diagnosis of primary disabling condition, and mobility. The current provisions of the disability insurance program appear in the appendix. Information on sampling variability is presented in the Technical Note.

The number of beneficiaries and total expenditures under the social security disability insurance program have grown significantly since 1966, the effective date of the last major liberalization of the definition of disability. However, the size of the total beneficiary population peaked in 1978 and a small decrease has occurred since then. Salient features of program growth from 1967 through 1984, the last year covered by the detailed data in this report, are summarized in Table A; aggregations for 1985, although not included in other tables (because details are not yet available), are also shown in Table A.

Table A.—Disability Insurance Program Data, 1967-85

Year	Number of insured workers (in millions)[1]	Number of beneficiaries in current-payment status[2]	Number of applications (in thousands)[3]	Number of allowances (in thousands)[4]	Program expenditures (in millions)		
					Total	Administrative	Benefit payments[5]
1967...	55.7	1,193,120	573.2	301.4	2,089	109	1,939

1984...	105.0	2,569,535	1,146.2	357.1	18,546	625	17,897
1985...	107.9	2,656,500	1,169.2	377.4	19,478	608	18,827

[1]At beginning of calendar year.
[2]At end of calendar year.
[3]About 7 percent of the applications do not require a determination.
[4]For 1965 and 1971, 53 report weeks; all other years, 52 report weeks. Allowances reported for 12 calendar months. Includes allowances on appellate cases as well as initial allowances.
[5]Includes rehabilitation services on transfers to railroad retirement accounts.

Appendix
Disability Insurance Under Social Security

The Disability Insurance (DI) program was established in 1956 to provide monthly benefits to individuals unable to do substantial gainful work because of severe physical or mental handicaps.

I. Types of protection

A. Monthly benefits are provided for:

1. Disabled workers under age 65 and
   a. dependent children under age 18
   b. wife, regardless of age, if she has eligible dependent child/children in her care, and
   c. dependent spouse age 62 or over.
2. Adults disabled in childhood (before age 22) who are dependent sons or daughters of entitled or insured deceased workers.
3. Disabled widows or widowers, and disabled divorced wives.

B. Medicare protection is provided for:

1. Disabled workers, persons who became disabled before age 22, and disabled widows and widowers age 50 or over who have been entitled to disability benefits for 24 consecutive months.
2. People with permanent kidney failure (long-term dialysis treatment or kidney transplant) who are insured or are dependent spouses or children of insured workers or beneficiaries.

Medicare coverage extends for 2 years after cash benefits are terminated or, if later, the end of the reentitlement period. Disabled workers who have left the beneficiary rolls and return within 5 years do not have a 24-month waiting period before resumption of Medicare protection.

C. Preservation of old-age and survivors insurance benefit rights for disabled workers. The period the worker was disabled is excluded in determining future eligibility to benefits or in computing benefit amounts.

II. Eligibility requirements

A. Definition of disability

The person must be unable to engage in any substantial gainful activity, and have a disability that can be expected to result in death or to last for a continuous period of not less than 12 months; or be statutorily blind within the meaning of the law (central vision acuity of 20/200 or less in the better eye with corrective lens).

B. Waiting period

The person must have been disabled for at least 5 consecutive months.

C. Filing application

The person must file an application. Benefits can be provided on the worker's record after death if all conditions of entitlement are met and an application is filed within 3 months after his/her death.

D. Insured status

The person must have sufficient quarters of coverage to meet the eligibility requirements. Before 1978, a quarter of coverage was a calendar quarter in which a worker was paid $50 or more in wages for employment covered under the law. In 1978, a worker received 1 quarter of coverage for each $250 of annual earnings (up to a total of 4) reported from employment. The amount is subject to automatic annual increases in proportion to increases in average annual earnings. In 1979, the amount was $260; in 1980, it rose to $290; and in 1981, it increased to $310. In 1982, the amount stood at $340. Currently, it is $370. To be insured for disability, a person must be fully insured with at least 20 quarters of coverage in the last 40-quarter period ending with the quarter in which the worker became disabled. A worker disabled before the quarter in which he/she attains age 31 is insured for disability if the person has covered employment in one-half the quarters between attainment of age 21 and onset of disability. A worker disabled before the quarter in which the worker attains age 24 is insured for disability if he/she has 6 quarters of coverage in the 12-quarter period before

onset of disability. A worker disabled for blindness needs only fully insured* status.

*Fully insured.—With at least 1 quarter of coverage (whenever acquired) for each year elapsing after 1950 (or the year in which the worker attained age 21, if later) and before the year in which insured status is determined, or, if earlier, the year in which a woman reaches age 62 or, for a man on the year he reaches age 65, or, for a man born after January 1, 1911, the later of either the year he reaches 62 or 1975. If any part of a year has been included in a period of disability, that year is not counted as an elapsed year. A minimum of 6 quarters of coverage is required. The maximum number of quarters of coverage required is 40.

E. Duration of benefit payments

Benefit payments continue until the beneficiary returns to substantial gainful employment, recovers medically, dies, or attains age 65. Upon attainment of age 65, a disabled worker's benefit is converted to a retirement benefit with no reduction regardless of the number of years in which the worker was unable to work because of disability.

III. Benefit amounts

Benefit payments for disabled workers are computed in the same way as those for retired workers. They are based on the worker's earnings record over the period from the year of attainment of age 21 to the year of onset of disability. One year of lowest earnings is dropped from the calculation for each 5 years of countable earnings. (A minimum of 2 years of earnings is required in the computation.) Earnings in each year are indexed to current dollar levels based on changes in average earnings for all workers. Then, the proper number of years of lowest earnings are dropped and average indexed monthly earnings (AIME) are calculated. The AIME is then used to compute the basic benefit amount, the Primary Insurance Amount (PIA) using a benefit formula, specified in the law, and designed to maintain constant levels of replacement of earnings over time.

The PIA is the amount of benefit payable to the disabled worker. Additional auxiliary benefits are paid to a dependent spouse, a dependent child under age 18 or an aged spouse. The amount of the benefit payable to an auxiliary is equal to one-half the worker's PIA. The total benefit payable to the family, may not, however, exceed 150 percent of the worker's PIA or 85 percent of the worker's AIME. The worker is guaranteed at least 100 percent of his/her PIA. Once on the rolls, the worker's benefit is indexed to changes in the cost of living as measured by the consumer price index.

IV. Vocational rehabilitation

Applicants for disability benefits are referred to State vocational rehabilitation agencies for restorative services so that as many disabled persons as possible may be returned to competitive employment. Payment for the costs of these services is provided under the regular Basic Support Program (BSP), shared 20 percent by the State and 80 percent by the Federal Government. However, if the beneficiary completes the VR service program and works for 9 consecutive months at earnings levels at least equal to the amount currently considered to meet the substantial gainful activity (SGA) test, the State is reimbursed for 100 percent of service costs from SSA trust funds in addition to the BSP payment.

V. Incentives to return to work

1. The law provides for a trial work period to enable a disabled beneficiary to continue receiving benefits while testing his capacity to work. If a beneficiary has not recovered medically from his impairment but returns to work, he may work for 9 months before an evaluation is made as to whether the work constitutes substantial gainful activity, regardless of the amount of his earnings. However, any month in a trial work period in which a person does not earn over $75 in wages or engage in business for more than 15 hours does not count as a trial work month. The 9 months of trial work need not be consecutive and may include a number of separate work efforts. If, after the trial work period, work is not found to be substantial gainful activity, disability benefits continue. If, at the end of the trial work period, he/she is found to be engaging in substantial gainful activity, he/she receives 3 more months of benefits before suspension.
2. A reentitlement period after trial work is established. For the first 12 months of trial work, the beneficiary receives full benefits regardless of the amount earned. For the second 12 months, the beneficiary's payments are paid for the months in which the work attempt does not represent substantial gainful activity. If the 24 months represents a successful work effort, benefits are then terminated; if not, benefits are automatically reinstated.
3. Earnings of $300 per month are considered to represent substantial gainful activity. However, work expenses incurred as a result of the impairment or disability are disregarded in determining whether the earnings level represents substantial gainful activity.

Technical Note

The data in this report reflect decisions on disability claims made during calendar years 1980-84 inclusive, as reflected in the administrative records of the Social Security Administration (SSA). The data are limited to disabled workers. Persons allowed childhood disability benefits and widow's or widower's benefits are excluded from this report.

The data on disabled-worker allowances were based on information derived from yearly samples of favorable dispositions. The yearly samples are 20 percent simple random samples.

Estimated Procedure

Since the data in the tables were obtained from a sample of records, it was necessary to inflate the sample figures to produce estimates of the population totals, the population being yearly worker awards as published in SSA's **Social Security Bulletin**. Since the disability decision is made at the State level by State agencies, the population is broken down by States. The **Bulletin** does not publish State breakdowns of the yearly worker award totals. The sample is selected from an aggregate of State agency records. An independent source of information on the target population is SSA's Master Beneficiary Record. The State totals were obtained from this file.

The State totals are proportionally adjusted to agree with the **Bulletin** total. As a final step, all sample records without a valid primary diagnosis code are dropped from the sample. Ratio estimation is used to inflate the valid sample records to the adjusted State totals and individual case weights are inserted into sample files.

Sampling Variability

Due to sampling variability, estimates based on samples can be expected to differ from figures that would have been obtained if, under the same conditions as the actual sample survey, the entire population of the data had been used for tabulations. The particular sample selected for this study of disability applicants is one of a large number of similar probability samples of the same size, that, by chance, might have been selected under the same specifications. Each of the possible samples would yield somewhat different sets of results. The deviation of a sample estimate from a true population figure is called the sampling error. The standard error of an estimate is a measure of the possible deviation of the sample estimate from the true population figure.

In conjunction with associated estimates, the standard error may be used to define confidence intervals or ranges that would have a specified probability of including the true population figure. To illustrate, if all possible samples were selected, each of these surveyed under essentially the same conditions, and an estimate and its estimated standard error were calculated from each sample, then —

(1) Approximately 68 percent of the intervals from 1 standard error below to 1 standard error above the derived estimate would include the true populaton figure.

(2) Approximately 95 percent of the intervals from 2 standard errors below to 2 standard errors above the derived estimate would include the true population figure.

(3) Approximately 99 percent of the intervals from 2½ standard errors below to 2½ standard errors above the derived estmate would include the true population figure.

Thus, for a particular sample, one can say with specified confidence that the true population figure is included in the constructed interval.

The sampling variability for this report was calculated on the basis of a simple random sample. The effects of ratio estimation to compensate for primary diagnosis coding problems and sample retrieval problems have not been incorporated into the calculations. However, there is no reason to suspect that the characteristics of the selected sample cases that were unusable for some reason were different in any way and therefore the results have not been effected. Ratio estimation in itself usually reduces sampling variability. Under these circumstances the following tables do provide an indication of the general order of magnitude of the sampling variability.

Sampling Variability of Estimated Number of Persons

The following table provides approximate standard errors for estimates for the number of persons with given characteristics. The estimates and approximate sampling variability shown are for the inflated sample data. Linear interpolation may be used for estimated numbers not shown in the tables.

Approximate standard errors for estimated number of workers with disability insurance claims allowances

Estimated number (inflated sample)	Standard error
50	14
100	20
250	32
500	45
1,000	63
2,500	100
5,000	141
7,500	172
10,000	198
25,000	308
50,000	424
75,000	505
100,000	566
250,000 and over	707

Sampling Variability of Estimated Percentage of Persons

The reliability of an estimated percentage depends on both the size of the percentage and the size of the total upon which the percentage is based. The following table provides the approximate standard errors for percentages of persons with given characteristics. The body of the table is expressed in percentage points. The bases shown are expressed in terms of the inflated sample data. Linear interpolation may be used for percentages and base figures not shown in the tables.

Approximate standard errors for estimated percentages of workers with disability insurance claims allowances

Base of percentage (inflated sample)	Estimated percentages				
	2 or 98	5 or 95	10 or 90	25 or 75	50
50	4.0	6.2	8.5	12.2	14.1
100	2.8	4.4	6.0	8.7	10.0
250	1.8	2.8	3.8	5.5	6.3
500	1.3	1.9	2.7	3.9	4.5
1,000	0.9	1.4	1.9	2.7	3.2
2,500	0.6	0.9	1.2	1.7	2.0
5,000	0.4	0.6	0.8	1.2	1.4
7,500	0.3	0.5	0.7	1.0	1.2
10,000	0.3	0.4	0.6	0.9	1.0
25,000	0.2	0.3	0.4	0.5	0.6
50,000	0.1	0.2	0.3	0.4	0.4
75,000	0.1	0.2	0.2	0.3	0.4
100,000	0.1	0.1	0.2	0.3	0.3
250,000 and over	0.1	0.1	0.1	0.2	0.2

Nonsampling Variability

In addition to sampling errors, the estimates are subject to various response and operational errors of collection, response, coding, transcription, imputation for nonresponse, et cetera. These errors of response and operations would also occur if a complete study were to be conducted under the same conditions as the survey. Explicit measures of their effects generally are not available. However, many of the response and operational errors were detected and corrected in the edits of the data for reasonableness and consistency.

1986 Annual Statistical Supplement

This data-packed compilation is the most widely used reference in the fields of social insurance and social welfare. Just published by Social Security's Office of Research and Statistics, the **1986 Supplement** features the latest comprehensive data on all the major income security programs: OASDI, SSI, AFDC, Medicare, Medicaid, Black Lung, Food Stamps, and Low Income Home Energy Assistance. Also included are data on other important social insurance programs—such as veterans' programs, the railroad retirement program, and various State unemployment and workers' compensation programs. More than 200 detailed tables provide both historical and current information on the status of the Nation's income security system.

At the beginning of the **Supplement** is a brief legislative history (current to the fall of 1986) of each of the major programs. At the end is a glossary of terms used throughout the publication. Knowing the precise definition of the various terms is essential to understanding and using the data.

Use this form to order the **1986 Annual Statistical Supplement** or to subscribe to the **Social Security Bulletin.** If you already subscribe to the **Bulletin,** the **Supplement** is included as part of your subscription. New subscribers will receive next year's **Supplement** when it is available and therefore will want to order the **1986 Supplement** at this time.
